Содержание

1 Strategy.txt

```
- Проверить руками сэмплы
- Подумать как дебагать после написания
- Выписать сложные формулы и все +-1
- Проверить имена файлов
- Прогнать сэмплы
- Переполнения int, переполнения long long
- Выход за границу массива: _GLIBCXX_DEBUG
- Переполнения по модулю: в
 ↪ псевдо-онлайн-генераторе, в функциях-обертках
- Проверить мультитест на разных тестах
- Прогнать минимальный по каждому параметру тест
- Прогнать псевдо-максимальный тест(немного чисел,
 ↪ но очень большие или очень маленькие)
- Представить что не зайдет и заранее написать
 ↪ assert'ы, прогнать слегка модифицированные тесты
- cout.precision: в том числе в интерактивных
 ↪ задачах
- Удалить debug-output, отсечения для тестов,
 ↪ вернуть оригинальный maxn, удалить
 ↪ _GLIBCXX_DEBUG
- Вердикт может врать
- Если много тестов(>3), дописать в конец каждого
 ↪ теста ответ, чтобы не забыть
- (WA) Потестить не только ответ, но и содержимое
 ↪ значимых массивов, переменных
- (WA) Изменить тест так, чтобы ответ не менялся:
 ↪ поменять координаты местами, сжать/растянуть
 ↪ координаты, поменять ROOT дерева
- (WA) Подвигать размер блока в корневой или
 ↪ битсете
- (WA) Поставить assert'ы, возможно написать чекер
 ↪ с assert'ом
- (WA) Проверить, что программа не печатает
 ↪ что-либо неожиданное, что должно попадать под
 ↪ PE: inf - 2, не лекс. мин. решение, одинаковые
 ↪ числа вместо разных, неправильное количество
 ↪ чисел, пустой ответ, перечитать output format
- (TL) cin -> scanf -> getchar
- (TL) Упихать в кэш большие массивы, поменять
 ↪ местами for'ы или измерения массива
- (RE) Проверить формулы на деление на 0, выход за
 ↪ область определения(sqrt(-eps), acos(1 + eps))
- (WA) Проверить, что ответ влезает в int
```
